

TEST 2

I. Replace each italicized words with a synonymous one.

It is believed that our *inherited* (1) genetic characteristics play the *decisive* (2) role in our being beautiful, attractive and appealing to other individuals. Although there is no *clear* (3) theory on what beauty really is and how it works, the results of a recent scientific *research* (4) seem to *confirm* (5) the hypothesis that our facial features are *determined* (6) by our brains. Their possible role is to *reflect* (7) health and fertility as well as genetic superiority - the quality that people, *supposedly* (8), share with animals which, like humans, have their own sexual preferences. Most species of birds, for example, rely on the brightest colours of plumage when *selecting* (9) their *partners* (10). To them, the vivid *shades* (11) of the feathers indicate the potential partner's genetic fitness to produce healthy *children* (12). In humans, similarly, beauty *shows* (13) our well-being and our sexual attractiveness, but as far as our facial characteristics are taken into account, people *tend* (14) to regard as extremely *charming* (15) the faces with the highest degree of symmetry. And equally effectively, the facial properties may also indicate the appeal of the whole body.
